PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 7+ years of experience building production apps end to end: Flutter mobile apps for iOS and Android, Laravel/Supabase backends, web admin dashboards, and relational and NoSQL databases. Delivered production apps across healthcare, education, transportation, e-commerce, and IoT, including a ride-hailing platform where custom engineering cut operational costs 60%. Expert in Clean Architecture and BLoC/Cubit, with native Android foundations and wearable hardware integration experience. Pharmacy degree adds healthcare domain expertise. Published open-source contributor on pub.dev. Currently at Numersalis (France).

KEY ACHIEVEMENTS

- **Co-founded a ride-hailing startup** (Waslny), cutting operational costs 60% via custom engineering that replaced costly third-party services
- **Shipped production apps** to the App Store and Google Play across healthcare, education, transportation, and IoT
- **Built secure healthcare apps** handling sensitive medical data, using SSL pinning, encryption, and secure storage
- **Published 2 open-source packages** on pub.dev, contributing to the global Flutter developer community

TECHNICAL SKILLS

Languages & Frameworks: Flutter, Dart, Java (Android Native), Kotlin basics
Architecture: Clean Architecture, MVVM, SOLID Principles, Dependency Injection
State Management: BLoC/Cubit (Expert), GetX, Provider, Riverpod
Backend & APIs: REST APIs, GraphQL, PHP/Laravel, Firebase (Firestore, Auth, FCM), Supabase, WebSockets, API Design & Integration
Database: PostgreSQL, MySQL, MongoDB, Firebase Firestore, SQLite, Hive, Offline-First Architecture
Security: SSL Pinning, AES Encryption, OAuth 2.0, Secure Storage, Medical Data Privacy
DevOps & Testing: Git, GitHub Actions, CI/CD, Unit/Widget/Integration Testing, TDD

Platforms & Release: iOS & Android, Web, Desktop (Electron), App Store Connect, Google Play Console, TestFlight, Platform Channels, Native Integration

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Full-Stack) | Numersalis, France (Remote) *May 2026 – Present*

- Building mobile apps across diverse domains for European clients: a location-based recommendation platform (travel/leisure), a sports-club management system, e-commerce, and e-learning
- Integrated a saddle-mounted IoT sensor with the mobile app, processing real-time analytics on rider performance (posture, balance, and position) and syncing data bidirectionally with the server database
- Designed and developed PostgreSQL databases and built web applications with both an admin interface and a user interface alongside the Flutter apps
- Driving architecture decisions and code reviews within an international engineering team

Senior Software Engineer | ZONE X (formerly Insight Plus) *Feb 2025 – Apr 2026*

- Developed software and digital systems at a digital creativity and technology company specializing in software development, digital systems, and technology solutions

Co-Founder & Lead Flutter Developer | Waslny (Startup) *Feb 2025 – Present*

- Co-founded ride-hailing startup, architecting dual-app ecosystem (passenger + driver) with real-time GPS tracking from the ground up
- Reduced operational costs by 60% by engineering custom solutions replacing costly third-party services, enabling higher driver earnings
- Owned full technical direction and product decisions. Tech: Flutter, BLoC/Cubit, Google Maps API, Firebase

Senior Flutter Developer (Freelance) *Jan 2019 – Jan 2025*

- Managed complete project lifecycle independently for cross-platform apps published to both the App Store and Google Play, across healthcare, education, and transportation
- Implemented Clean Architecture with BLoC/Cubit ensuring scalable, testable codebases across all projects
- Owned end-to-end delivery on multiple projects, building and maintaining backend services (Laravel, Supabase) alongside the mobile client, including database design, API development, and server-side business logic

- Designed offline-first architecture with local caching, keeping apps fully usable in low-connectivity environments
- Applied security best practices (SSL pinning, encryption) for healthcare apps handling sensitive medical data; set up CI/CD pipelines with GitHub Actions

Android Developer (Native) *Jan 2018 – Dec 2018*

- Built native Android applications in Java, gaining platform-level foundations in Activity/Fragment lifecycle, Material Design, and Android SDK that continue to inform cross-platform architecture decisions

FEATURED PROJECTS

Emirates RX – Medical Platform (UAE): Pharmaceutical information platform for pharmacists with SSL pinning and encrypted local storage; offline-first so drug data stays available without a connection. Tech: Flutter, Clean Architecture, Hive.

EduNest – School Management Platform: Multi-role platform (students, instructors, parents) with real-time updates and GraphQL APIs. Tech: Flutter, BLoC, GraphQL, Firebase.

Al-Khudairy Medical Lab: Secure lab results platform with PDF generation and push notifications. Tech: Flutter, BLoC, Firebase, PDF Generation.

OPEN SOURCE & EDUCATION

Open Source: StepWise (pub.dev/packages/stepwise) – multi-step forms package | Dynamic Rail (pub.dev/packages/dynamic_rail) – navigation rail widget

Education: Bachelor of Pharmacy (PharmD), Sohag University, Egypt – 2024. Provides healthcare domain expertise (medical terminology, pharmaceutical workflows, patient data privacy).

Languages: Arabic (Native), English (Professional – Advanced Reading/Writing, Intermediate Speaking)
Personal: Date of Birth: 22 Jan 2000 | Nationality: Egyptian | Single | Military service: Exempted
